DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15-25 and 27-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Ben-Haim et al (US 6,321,109).

Ben-Haim discloses a method of excavating tissue in the body using microbubbles and cavitation via ultrasound. In one embodiment, a catheter is used to bring a microbubble solution to a tissue for excavation while ultrasound is applied to induce cavitation of the solution thus causing embolism, which is an inherent result (col 8, line 39-col9, line 16). A particular lipid coated microbubble solution is described in US Patent No. 5,215,680 to D'Arrigo, the disclosure of which is incorporated by reference in Ben-Haim. One step in the creation of the solution is to vigorously shake the mixture, thereby trapping macroscopic gas pockets, containing either the particulate aerosol or particle adhering to the gas/liquid interface, within the body of the aqueous lipid surfactant solution (col 9, lines 52-55). As illustrated in Figure 1C, the system includes an application device 74, a microbubble solution, an injection device 62, 68, and a delivery device 60.

Response to Arguments

Applicant's arguments with respect to claims 15-25 and 27-38 have been considered but are moot in view of the new ground(s) of rejection. This action is made non-Final.
